

# Algorithm Practice Exam (Paper-and-Pencil Mode)

## 1. Sentiment Analysis (Graded)

| English   | Chinese (中文)   |
|---|--|
| <p>Problem:</p> <p>Calculate the sentiment score of the tweet: 'The service was not very good.'</p>   | <p>题目:</p> <p>计算推文 Sentiemnt 分数 : 'The service was not very good.'</p>   |
| <p>Given Lexicon:</p> <ul style="list-style-type: none"><li>- good: +2</li><li>- service: 0 (neutral)</li></ul>   | <p>给定词典 :</p> <ul style="list-style-type: none"><li>- good: +2</li><li>- service: 0 (中性)</li></ul>   |
| <p>Rules:</p> <ol style="list-style-type: none"><li>1. 'very' (intensifier): increases the score of the next word by 50%.</li><li>2. 'not' (negator): multiplies the score of the following phrase by -0.8.</li></ol>   | <p>规则 :</p> <ol style="list-style-type: none"><li>1. 'very' (加强词): 将下一个词的分数增加 50%。</li><li>2. 'not' (否定词): 将后续短语的分数乘以 -0.8。</li></ol>  |
| <p>Solution:</p> <ol style="list-style-type: none"><li>1. **Identify Sentiment Words**: 'good' (+2).</li><li>2. **Apply Intensifier**: 'very' modifies 'good'.<br/><math>\text{Score}(\text{'very good'}) = \text{Score}(\text{'good'}) * 1.5 = 2 * 1.5 = 3.</math></li><li>3. **Apply Negation**: 'not' modifies 'very good'.<br/><math>\text{Score}(\text{'not very good'}) = \text{Score}(\text{'very good'}) * -0.8 = 3 * -0.8 = -2.4.</math></li></ol> <p>**Final Score**: -2.4.</p> | <p>解析:</p> <ol style="list-style-type: none"><li>1. **识别情感词**: 'good' (+2)。</li><li>2. **应用加强词**: 'very' 修饰 'good'。<br/>分数('very good') = 分数('good') * 1.5 = 2 * 1.5 = 3。</li><li>3. **应用否定词**: 'not' 修饰 'very good'。<br/>分数('not very good') = 分数('very good') * -0.8 = 3 * -0.8 = -2.4。</li></ol> <p>**最终分数**: -2.4。</p> |

## 2. Pointwise Mutual Information (PMI)

| English  | Chinese (中文)  |
|--|---|
| <p>Problem:</p> <p>Calculate PMI(coffee, cup).</p> <p>Corpus Statistics:</p> <ul style="list-style-type: none"> <li>- Total word pairs (\$N\$): 10,000</li> <li>- Count('coffee') (\$c_x\$): 100</li> <li>- Count('cup') (\$c_y\$): 200</li> <li>- Count('coffee', 'cup') co-occurrence (\$c_{xy}\$): 20</li> </ul>  | <p>题目:</p> <p>计算 PMI(coffee, cup)。</p> <p>语料库统计 :</p> <ul style="list-style-type: none"> <li>- 总词对数 (\$N\$): 10,000</li> <li>- Count('coffee') (\$c_x\$): 100</li> <li>- Count('cup') (\$c_y\$): 200</li> <li>- Count('coffee', 'cup') 共现 (\$c_{xy}\$): 20</li> </ul>   |
| <p>Solution:</p> <p>Formula: <math>\text{PMI}(x, y) = \log_2 \frac{P(x,y)}{P(x)P(y)}</math></p> <p>1. **Calculate Probabilities**:<br/> <math>P(x) = 100 / 10000 = 0.01</math><br/> <math>P(y) = 200 / 10000 = 0.02</math><br/> <math>P(x,y) = 20 / 10000 = 0.002</math></p> <p>2. **Compute Ratio**:<br/> <math>\frac{0.002}{0.01 \times 0.02} = \frac{0.002}{0.0002} = 10</math></p> <p>3. **Logarithm**:<br/> <math>\text{PMI} = \log_2(10) \approx 3.32</math></p> | <p>解析:</p> <p>公式: <math>\text{PMI}(x, y) = \log_2 \frac{P(x,y)}{P(x)P(y)}</math></p> <p>1. **计算概率**:<br/> <math>P(x) = 100 / 10000 = 0.01</math><br/> <math>P(y) = 200 / 10000 = 0.02</math><br/> <math>P(x,y) = 20 / 10000 = 0.002</math></p> <p>2. **计算比率**:<br/> <math>\frac{0.002}{0.01 \times 0.02} = \frac{0.002}{0.0002} = 10</math></p> <p>3. **取对数**:<br/> <math>\text{PMI} = \log_2(10) \approx 3.32</math></p> |

### 3. Naive POS Tagging

| English   | Chinese (中文)   |
|---|--|
| <p>Problem:</p> <p>Tag the word 'tweeted' in the sentence 'He tweeted.'</p> <p>Training Data:</p> <ul style="list-style-type: none"> <li>- 'tweet': {Verb: 10, Noun: 2}</li> <li>- 'tweeted': Not in training data (Unknown)</li> </ul> <p>Rules for Unknown Words:</p> <ol style="list-style-type: none"> <li>1. If capitalized -&gt; NNP (Proper Noun)</li> <li>2. If ends with 'ed' -&gt; VBD (Past Tense Verb)</li> <li>3. Default -&gt; NN (Noun)</li> </ol> | <p>题目:</p> <p>为句子 'He tweeted' 中的 'tweeted' 标注词性。</p> <p>训练数据 :</p> <ul style="list-style-type: none"> <li>- 'tweet': {Verb: 10, Noun: 2}</li> <li>- 'tweeted': 不在训练数据中 (未知词)</li> </ul> <p>未知词规则 :</p> <ol style="list-style-type: none"> <li>1. 如果首字母大写 -&gt; NNP (专有名词)</li> <li>2. 如果以 'ed' 结尾 -&gt; VBD (过去式动词)</li> <li>3. 默认 -&gt; NN (名词)</li> </ol> |
| <p>Solution:</p> <p>1. **Lookup**: Check 'tweeted' in the training dictionary.<br/> **Result**: Not found (Unknown).</p> <p>2. **Apply Unknown Word Rules** (in order):<br/> <ul style="list-style-type: none"> <li>- Is it capitalized? No ('t' is lowercase).</li> <li>- Does it end with 'ed'? **Yes**.</li> </ul> </p> <p>3. **Conclusion**: Assign tag **VBD** based on the suffix rule.</p>   | <p>解析:</p> <p>1. **查找**: 在训练字典中查找 'tweeted'。**结果**: 未找到 (未知词)。</p> <p>2. **应用未知词规则** (按顺序):<br/> <ul style="list-style-type: none"> <li>- 首字母大写吗 ? 否 ('t' 小写)。</li> <li>- 以 'ed' 结尾吗 ? **是**。</li> </ul> </p> <p>3. **结论**: 根据后缀规则标记为 **VBD**。</p>   |

### 4. Jaccard Similarity

| English   | Chinese (中文)  |
|---|---|
| <p>Problem:</p> <p>Calculate the Jaccard Similarity between Doc A and Doc B.</p> <ul style="list-style-type: none"> <li>- Doc A: 'apple banana apple'</li> <li>- Doc B: 'apple orange banana'</li> </ul>  | <p>题目:</p> <p>计算文档 A 和文档 B 的 Jaccard 相似度。</p> <ul style="list-style-type: none"> <li>- Doc A: 'apple banana apple'</li> <li>- Doc B: 'apple orange banana'</li> </ul>   |
| <p>Solution:</p> <ol style="list-style-type: none"> <li>1. **Create Sets** (Unique words):<br/> <math>\\$Set(A) = \{\text{apple}, \text{banana}\}</math><br/> <math>\\$Set(B) = \{\text{apple}, \text{orange}, \text{banana}\}</math></li> <li>2. **Intersection** (<math>A \cap B</math>):<br/>           Words in both: 'apple', 'banana'. Count = 2.</li> <li>3. **Union** (<math>A \cup B</math>):<br/>           All unique words: 'apple', 'banana', 'orange'. Count = 3.</li> <li>4. **Calculate Jaccard**:<br/> <math display="block">J(A,B) = \frac{ A \cap B }{ A \cup B } = \frac{2}{3} \approx 0.67</math></li> </ol> | <p>解析:</p> <ol style="list-style-type: none"> <li>1. **创建集合** (唯一词):<br/> <math>\\$Set(A) = \{\text{apple}, \text{banana}\}</math><br/> <math>\\$Set(B) = \{\text{apple}, \text{orange}, \text{banana}\}</math></li> <li>2. **交集** (<math>A \cap B</math>):<br/>           两者都有的词: 'apple', 'banana'。数量 = 2。</li> <li>3. **并集** (<math>A \cup B</math>):<br/>           所有唯一词: 'apple', 'banana', 'orange'。数量 = 3。</li> <li>4. **计算 Jaccard**:<br/> <math display="block">J(A,B) = \frac{ A \cap B }{ A \cup B } = \frac{2}{3} \approx 0.67</math></li> </ol> |
